

MANAGEMENT SCHOOL OF THE FUTURE

The Ernest & Julio Gallo School of Management will be the “management school of the future” by advancing education and research in cognition, economics, data science, sustainability, and management through a scientific, evidence-based understanding of human-centered complex systems.

The Gallo School will offer cross-cutting programs working at the intersections of science, design, technology, and management of human-centered complex systems to create a more just, sustainable, and prosperous world.

ERNEST & JULIO GALLO SCHOOL OF MANAGEMENT

Thanks to a generous endowment from E. & J. Gallo Winery, the University of California, Merced is developing the Ernest & Julio Gallo School of Management. The new school, the fourth at UC Merced, will be a highly distinctive and innovative program that draws on the transdisciplinary expertise of scientists, researchers, and practitioners to prepare the next generations of management leaders focused on designing and managing complex systems.

ERNEST & JULIO
GALLO
SCHOOL OF MANAGEMENT

INNOVATION • SUSTAINABILITY • TECHNOLOGY

MISSION AND VISION

The Gallo School's mission is to develop students into outstanding leaders who direct public, private, and non-profit organizations. Drawing broadly from a wide array of disciplines, the Gallo School provides a well-rounded education that incorporates multiple perspectives for solving real-world problems. Reflecting the many domains in which science, design, data, and management skills are critical, the Gallo School prepares students for careers in areas of science, engineering, sustainability, and management.

The Gallo School's vision is to be a world leader in the science, design, innovation, and management of human-centered complex systems, creating fundamental and applied knowledge and developing ethical and excellent leaders who drive prosperity sustainably, locally and globally.

Join us in building futures by supporting the Gallo School.
